

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of the claims in the application:

**Listing of Claims:**

1-27 (Cancelled)

28. (Currently Amended) A method, comprising:

sensing a directional movement of a computer system on a surface via a first movement sensor; and

adjusting information displayed on a display of the computer system, wherein the information displayed is independent from the surface, and the adjusting is correlated to the directional movement of the computer system;

sensing external pressure on a perimeter of the display toward a movement sensor of the computer system, wherein the display of the computer system substantially overlaps the movement sensor of the computer system; and

translating the external pressure on a perimeter side of the display to a mouse click action associated with the perimeter side for the computer system.

29. (Previously Presented) The method of claim 28, wherein the first movement sensor is an optical sensor or a mechanical sensor.

30. (Previously Presented) The method of claim 28, wherein the directional movement comprises angular rotation of the computer system sensed by the first movement sensor and a second movement sensor;

31. (Previously Presented) The method of claim 28, further comprising:

correlating the directional movement of the computer system to a cursor movement on the display of the computer system.

32. (cancelled)
33. (Currently Amended) A method, comprising:  
sensing external pressure on a perimeter of a first section of a computer system toward a second section of the computer system, wherein the first section of the computer system comprises a display, and the first section of the computer system substantially overlaps the second section of the computer system; and  
translating the external pressure on a perimeter side of the first section to a mouse clicking action associated with the perimeter side for the computer system.
34. (Previously Presented) The method of 33, wherein the second section of the computer system comprises a movement sensor.
35. (Currently Amended) The method of 33, wherein the external pressure may be applied toward at the perimeter of the first section of the computer system.
36. (cancelled).
37. (Currently Amended) A computer-readable storage medium having stored thereon sequences of instructions which are executable by a computer system, and which, when executed by the computer system, cause the computer system to perform a method, comprising:  
sensing a directional movement of the computer system on a surface via a movement sensor; and  
adjusting information displayed on a display of the computer system, wherein the information displayed is independent from the surface, and the adjusting is correlated to the directional movement of the computer system;

sensing external pressure on a perimeter of the display toward a movement sensor of the computer system, wherein the display of the computer system substantially overlaps the movement sensor of the computer system; and

translating the external pressure on a perimeter side of the display to a mouse click action associated with the perimeter side for the computer system.

38. (Currently Amended) A computer-readable storage medium having stored thereon sequences of instructions which are executable by a computer system, and which, when executed by the computer system, cause the computer system to perform a method, comprising:

sensing external pressure on a perimeter of a first section of the computer system toward a second section of the computer system, wherein the first section of the computer system comprises a display, and the first section of the computer system substantially overlaps the second section of the computer system; and

translating the external pressure on a perimeter side of the first section to a mouse clicking action associated with the perimeter side for the computer system.
